Intro
We would like you to create a simple ecommerce website for purchasing vegetables. Be prepared to speak to and explain all of your work.

Functional Requirements
- User should be able to see a list of vegetables
- Vegetables should display the following attributes
  - Price ($)
  - Name
  - Description
- User should be able to add a vegetable to their shopping cart
- User should be able to view their shopping cart
- User should be able to edit quantities in their shopping cart
- User should be able to remove vegetables from their shopping cart
- User should be able to view the total cost of vegetables in their shopping cart

Technical Requirements
- Website must be built on HTML5 and JavaScript (Feel free to use JavaScript framework of choice)
- List of vegetables should be loaded from a vegetables.json
- Instructions for building/running your web application should be included in a ReadMe.md
- Application should run on a clean build with submitted code
- Include any patterns or practices you deem appropriate
- Any external dependencies should be included

Submissions
For submitting your project, please upload your source code to a public GitHub repository and share the repository by email to Jeff.Green@CHRobinson.com and Steven.Vantreeck@CHRobinson.com
